**RAVEN
CALIBRATION
GUIDE
(SIDE SCREEN)**

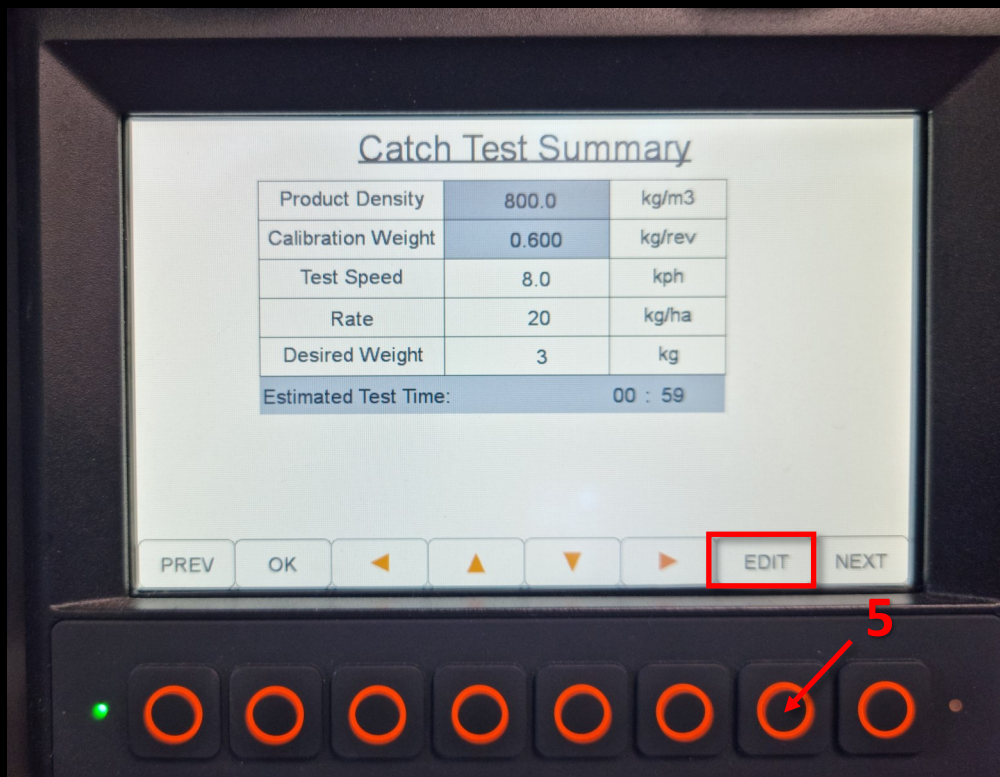

1. Use the arrow buttons to navigate to Rate Calibration.
2. Then press next.

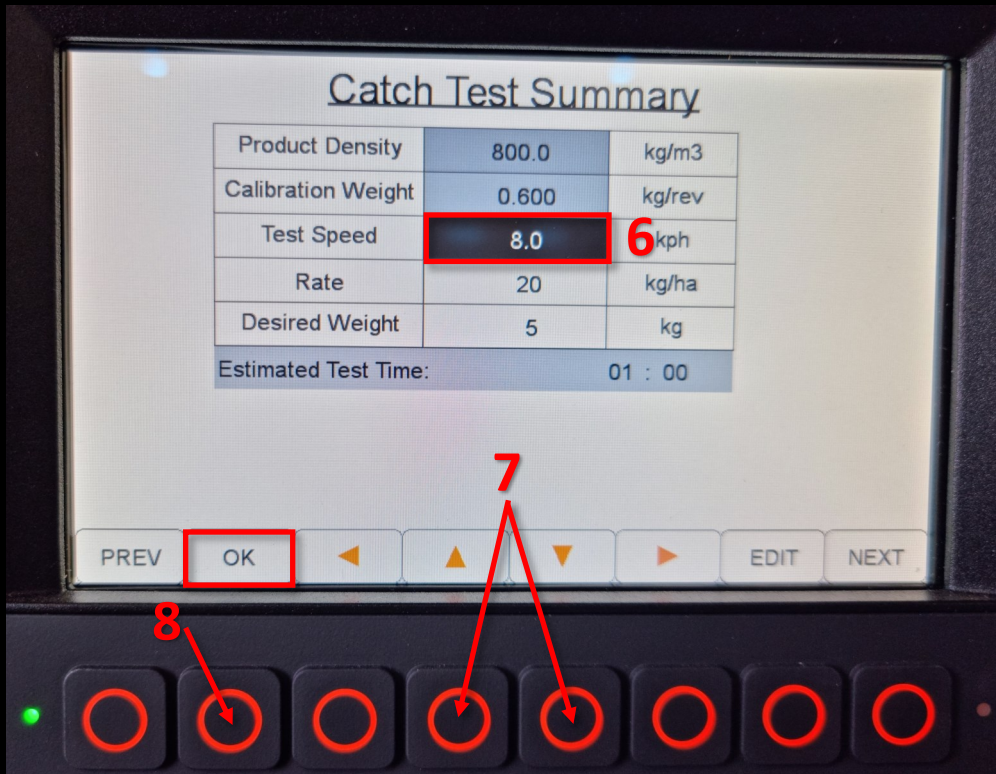

3. Press Calibrate

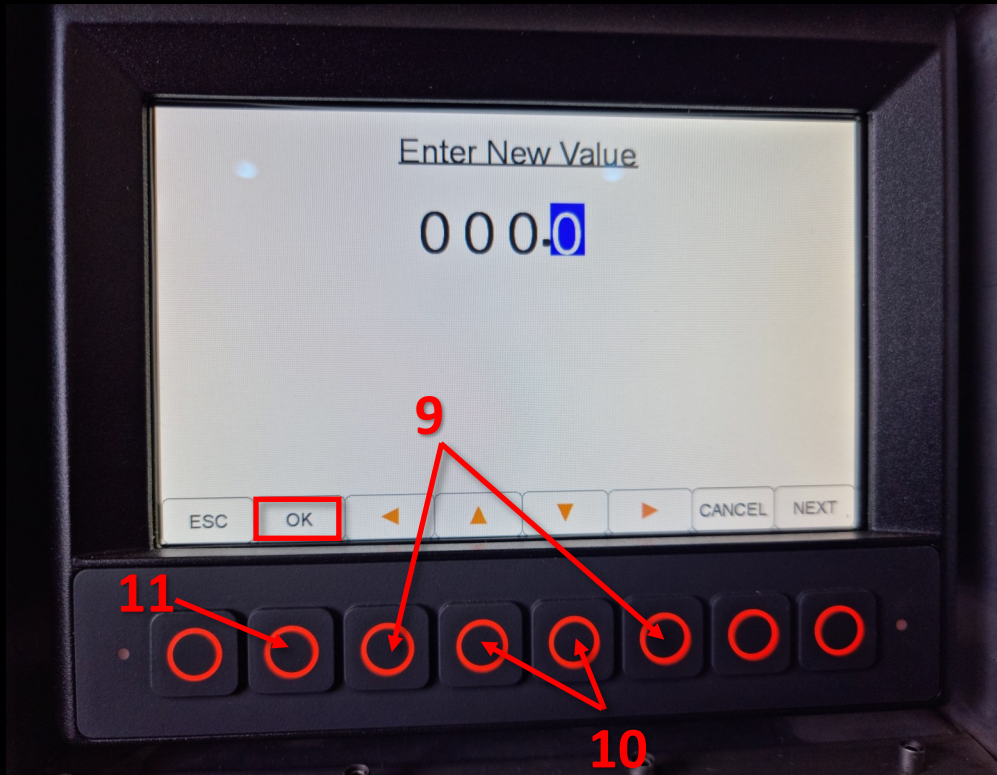

4. Press OK

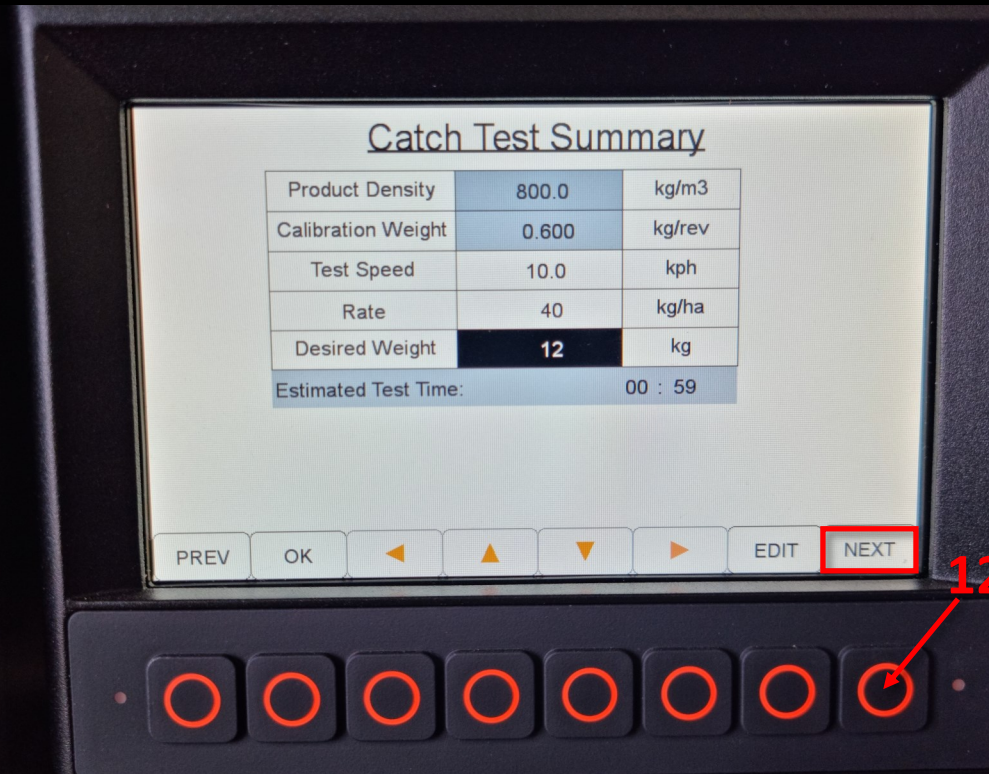

5. Press EDIT to enter edit mode.

6. Once in edit mode, the selected variable will be marked black as shown.
7. Use the arrow button to select which variable you want to change.
8. Press OK to edit the variable.

9. Use the left and right arrows to select which number to change.
10. Use the up and down arrows to edit the number.
11. Press OK to save your changes.

12. Once you are happy with your settings, press next.

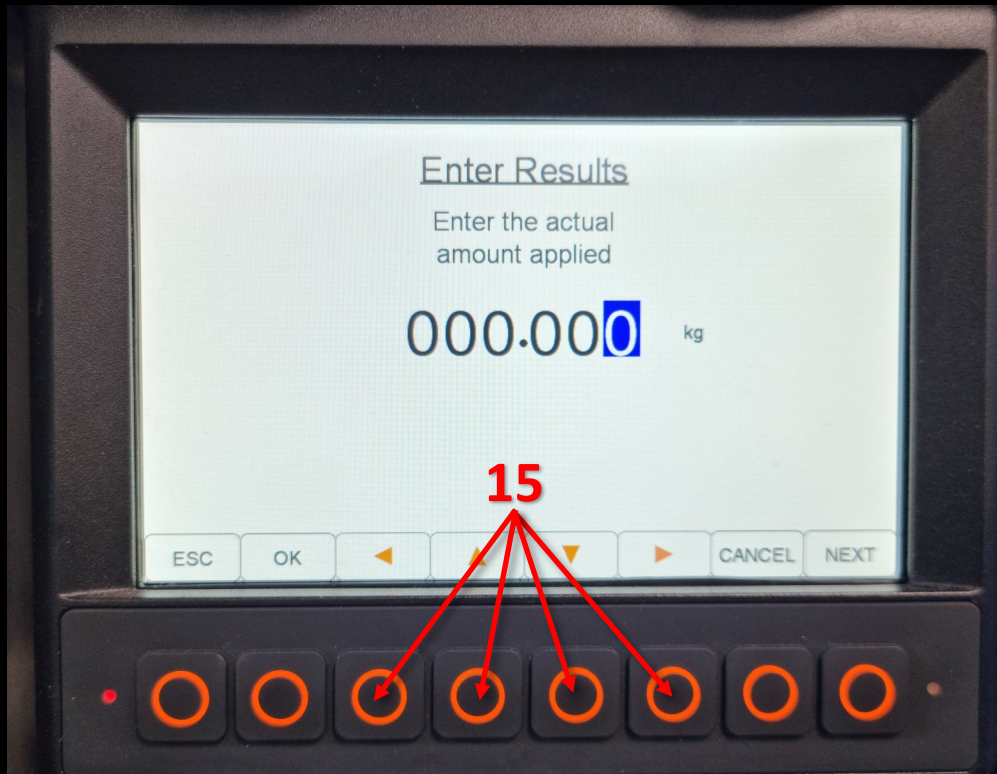

Test Speed is the desired planting speed. Desired Weight should be between 10 and 15 kg (Main Bin), or 3kg for small seeds. Max test time 10 min.

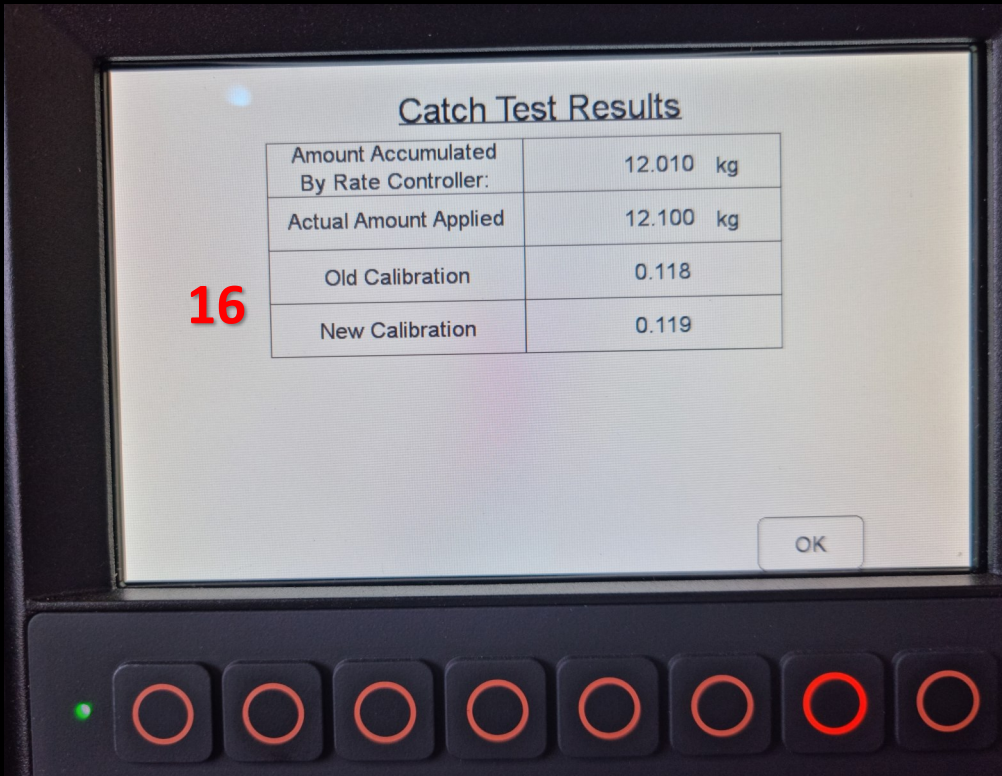

13. Press START to begin test.

14. Test will run.

15. Once test is complete, enter results using the arrow keys.

16. Old Calibration and New Calibration should be close in value. If not, repeat process.
